AI Software Engineer with **4 years of experience** building multi-tenant SaaS platforms, payment systems, and backend services. Built AI-powered applications with agents, tool calling, MCP integrations, RAG and access control.

Work Experience

Software Engineer — **AOShield Solutions** — **Sep 2026–Present**
Canada (Remote)

- **Modernize legacy APIs and ship product integrations, features, and bug fixes** contributing to code reviews, deployments, and sprint planning.
- **Help individual teammates adopt AI-assisted workflows** through hands-on guidance on MCP, reusable skills, and test generation and automation.

Lead Software Engineer — **Dara Services** — **Jan 2026–Sep 2026**
Odessa, Texas, United States (Remote)

- **Designed an AI-powered multi-agent platform** that enables agencies to manage business operations through natural language interfaces: model-agnostic architecture via AI gateway, MCP servers, tool calling, and attribute-based access control (ABAC).
- **Led the technical redesign of the core platform from scratch as a NestJS/React monorepo**, defining the architecture for new market verticals (Operations, E-commerce, Bookings, Payments).
- **Built full-stack observability with the Grafana stack** (Loki, Tempo, Prometheus), using canonical wide logging for end-to-end tracing and custom dashboards for core infrastructure, API performance, and AI telemetry.

Backend Software Engineer — **Dara Services** — **Oct 2023–Jan 2026**
Odessa, Texas, United States (Remote)

- **Engineered a multi-provider payment gateway system** with a common abstraction layer over Stripe, Openpay, NMI, and Elavon, plus 10+ domain microservices, including automated CRM and omnichannel support chat (WhatsApp/Instagram/Messenger).
- **Built Supabase backend for remittance engine**, handling up to 9,000 monthly transactions for a mobile app ecosystem.
- **Optimized CI/CD pipelines and Docker builds**, cutting deployment times by 50% and GitHub Actions costs by 80%.

Full Stack Developer — **Dasmex** — **Aug 2023–Nov 2023**
Mexico (Remote)

- **Developed full-stack web features using Next.js** for the Biomas pet management platform, building frontend interfaces and backend API routes.
- **Integrated MercadoPago and PayPal payment gateways**, supporting a checkout system for platform products and services.
- **Built features for animal care professionals**, enabling scheduling, job management, and service listings within the community.

Education

- **B.Sc. Computer Science,** University of Havana, Cuba. **2021–2025**

Technologies and Languages

- **Languages & Frameworks:** TypeScript, JavaScript, Python, C#, .NET, Java, SQL, NestJS, Next.js, React, Node.js.
- **Databases & Cloud:** PostgreSQL, Supabase, Redis, AWS, Docker, RabbitMQ, Grafana (Loki, Tempo, Prometheus).
- **Concepts & Integration:** System Design, Distributed Systems, Microservices, Event-Driven, CI/CD, AI Agents.
